5. What are the possible outcomes of my investment?

The Fund will be invested in a diversified portfolio, where the Fund may invest up to 99.8% of the Fund's NAV in equities, equity-linked notes, fixed income securities or money market instruments and fixed deposits. A minimum of 75% of the NAV of the Fund will be invested in INR-denominated assets, and the remaining balance will be investing in non INR-denominated assets. The performance of the Fund would be dependent on the equities and fixed income market that are investable by the Fund. The performance is reliant on the Manager's expertise in managing the Fund to meet its objective.

The Fund's investment into equities and fixed income instruments would to a great extent be linked to the price movements of the global equity and fixed income markets. If the equities and fixed income instruments that are investable by the Fund performs well, the Fund's performance may reflect the same. However, should the investments that are investable by the Fund perform poorly; the Fund's performance may also be impacted negatively.

Please note that unlike fixed deposits which generally provide a guarantee on capital invested and carry specific rate of return, the Fund's investments into fixed income securities does not provide a guarantee on capital contributed nor does it guarantee a fixed rate of return.

The Fund is not expected to make any income distribution. However, due to investments in equities, the Manager expects the Fund to yield incidental growth in capital. Please note that the capital and returns of the Fund are not guaranteed.

KEY RISKS

6. What are the key risks associated with this product?

General Risks

- **Market risk** – The Fund will be exposed to market uncertainties and fluctuations in the economic, political and social environment that will affect the market price of the investments either in a positive or negative way.
- **Fund manager risk** – The performance of the Fund depends on the experience, expertise and ability of the Manager to generate returns. Lack of any of the above mentioned may adversely affect the performance of the Fund.

⁺ subject to change at the Manager's discretion

Asset Management

- **Liquidity risk** – Liquidity risk refers to a scenario where an investment cannot be sold due to unavailability of a buyer for that investment or where the investment, by its nature, is thinly traded. This will have the effect of causing the investment to be sold at an unfavourable price.
- **Inflation risk** - Inflation risk is the risk of loss in the purchasing power of your investment due to general increase of consumer prices.
- **Loan financing risk** – If you intend to purchase Units of this Fund by means of borrowed/ financed monies and pledging those Units as collateral for the borrowed/ financed monies, you should be aware that if the NAV attributable to the Units falls below the borrowed/ financed amount, the lender may require you to provide additional forms of collateral.
- **Risk of Non-compliance** - This refers to the risk where the Manager does not comply with the applicable rules, laws, regulations or the Deed. Although not every non-compliance will necessarily result in some losses to the Fund, there is always a risk that losses may be suffered by the Fund.
- **Operational risk** - This risk refers to the possibility of a breakdown in the Manager's internal controls and policies. The breakdown may be a result of human error, system failure or fraud where employees of the Manager collude with one another. This risk may cause monetary loss and/or inconvenience to you.

Note: Please refer to section 4.1 of the Fund's Information Memorandum for further details of each risk.

Specific Risks

- **Equity investment risk** – The value of an equity investment depends on the companies' growth and earnings potential, sound management, treatment of minority shareholders, as well as a myriad of other factors. Failure to achieve the expected earnings would result in declining investment value which in turn affects the performance of the Fund.
- **Equity-linked notes risk** – The pricing of the equity-linked notes will depend on the price movements of the underlying equities. Any change to the pricing of the underlying equities would either positively or negatively impact the value of the equity-linked notes hence impacting the NAV of the Fund.
- **Credit/default risk** – The risk arises when the issuers of such instruments will not make timely payment of interest and/or principal amount. This may lead to default in the payment of interest and/or principal amount and ultimately the value of the Fund may be adversely affected
- **Concentration risk** - The Fund is subject to the risks linked to the particular Financial Institution, issuer or counterparty. The risk may be in the form of credit risk, for example, when the particular Financial Institution, issuer or counterparty is not able to repay the interest and/or principal possibly due to its poor financial position. Therefore, should such risk happens, the Fund's concentrated portfolio will cause the Fund's overall value to decline to a greater degree than if the Fund was exposed to a less concentrated portfolio.
- **Interest rate risk** – Fixed income instruments and money market instruments are subject to interest rate fluctuations. Generally, movement in interest rates affects the prices inversely, for example, when interest rates rise, prices of the instruments will fall. The fluctuations of the prices of the instruments will also have an impact on the NAV of the Fund.
- **Counterparty risk** - The risk is prevalent as the potential returns derived from the Fund's investment in equity-linked notes and derivatives ("Investments") are dependent on the ongoing ability and willingness of the issuer i.e. a Financial Institution to fulfil their respective financial commitments to the Fund in a timely manner. Bankruptcy, fraud or regulatory non-compliance arising out of and/or in connection with the issuer may impair the operations and/or the performance of the Fund.
- **Derivative risk** – Derivatives used by the Manager for hedging as well as for investment purposes may be subject to adverse changes that may result in a lower NAV.
- **Currency risk** – Whilst the Fund is denominated in RM, investments denominated in foreign currencies will cause the Fund to be exposed to currency risks.
- **Country risk** – Since the investments for the Fund may consist of investments issued in various countries in addition to Malaysia, the foreign investment portion of the Fund may be affected by the risks specific to the countries in which it invests. Such risks include changes in a country's economic fundamentals, changes in social and political stability and foreign investment policies, which may have an adverse impact on the Fund's investments.
- **Tactical asset allocation fund risk** - This Fund is a tactical asset allocation fund where the strategies employed to shift the asset mix between equities and equity-linked notes, fixed income instruments or money

Asset Management

market instruments and fixed deposits, depends on the prevailing market outlook. The Manager's investment decision pertaining to the asset allocation may adversely affect the Fund's performance if the assessment concluded by the Manager is not consistent with the market outlook.

Note: Please refer to section 4.2 of the Fund's Information Memorandum for further details of each risk.

It is important to note that events affecting the investments cannot always be foreseen. Therefore, it is not always possible to protect investments against all risks. The various asset classes generally exhibit different levels of risk.

You are recommended to read the whole Information Memorandum to assess the risks of the Fund. If necessary, you should consult your professional adviser(s) for a better understanding of the risks.

FEES & CHARGES

7. What are the fees and charges involved?

There are fees and charges involved and you are advised to consider them before contributing to the Fund.
