Strategies Employed

The Target Fund is a multi-asset portfolio that invests primarily in Chinese shares and bonds and employs an active asset allocation. Active asset allocation improves portfolio diversification and can provide better risk-adjusted returns over a cycle with smoother drawdowns in tail-events. They seek to add value by actively managing the fund's asset allocation, i.e. the allocation to various asset classes is not static. They believe that active asset allocation can serve as an additional diversifier to help deliver a strong risk-adjusted return, as well as dynamic de-risking.

Market Review

The second quarter of 2024 was marked by volatility and sector rotation across global markets. In May, macroeconomic data pointed to a potential soft landing for the U.S. economy, driving optimism across global equities and U.S. bonds. However, geopolitical developments and inflation concerns generated some pullbacks. Notably, U.S. indices such as the Dow Jones and S&P 500 reached record highs before softening. Chinese stocks initially rallied due to government measures aimed at bolstering the property sector, but the limited scale of these efforts led to skepticism and market corrections by the end of the month. Chinese equities and bonds saw mixed performance, with industrial production outpacing expectations while retail sales and property markets continued to struggle.

In June, global markets remained buoyed by easing inflationary pressures in the U.S. and strong performance in the AI sector, with technology stocks driving the Nasdaq up 6%. Despite positive U.S. momentum, Chinese markets remained subdued as industrial production grew steadily, but retail sales underperformed, highlighting imbalances in the economy. July saw continued market volatility, particularly within U.S. equities, which swung between gains and losses. Lower inflation and softer labor market data in the U.S. provided some optimism about a potential soft landing, while in China, efforts to stimulate growth continued with further interest rate cuts. Nevertheless, economic data from China pointed to ongoing weaknesses, with PMIs indicating sluggish domestic demand.

Investment Outlook

Looking ahead, market sentiment will remain influenced by central bank actions and geopolitical uncertainties, particularly in the U.S. and China. In the U.S., the potential for a rate cut by the Federal Reserve later in the year could reignite growth-oriented sectors like biotechnology and technology, which have been sensitive to monetary tightening. However, rising geopolitical tensions, particularly regarding tariffs and trade relations with China, could increase market volatility. Investors will likely remain focused on earnings growth and sector-specific developments, particularly in industries like artificial intelligence, which continue to attract attention.

In China, the economic outlook remains uncertain as the country grapples with weak domestic demand and persistent challenges in the property market. While further stimulus is expected from the government, the scale and effectiveness of these measures remain in question. As a result, the target fund manager anticipate a cautious approach from investors, with a preference for high-yield bonds and defensive equities. Overall, the target fund manager expect markets to remain volatile in the near term, with selective opportunities arising in sectors tied to innovation and areas of unmet medical need, such as AI, healthcare, and biotechnology.
